

Grease Trap/Interceptor Location

You are required to submit a diagram that indicates the location of an external grease trap and waste grease dumpster if used. Please indicate the location of sewer lines if known, direction of flow and also include any sampling manholes if present. Add a direction arrow to indicate what direction is North on your map. You may submit a blueprint that shows these features, draw additional information on a blueprint or draw your own on the attached page. The following diagram is an example that can be used as a guide. Note that information is more important than making a 'pretty' diagram/drawing.
